Visi-Trak® Releases Total-Trak™ Programmable Logic Controller (PLC) Interface *Integrated control of auxiliary devices for complete die casting process automation*

Cleveland Ohio, Charlottesville Virginia – Mary 23rd, 2008 – Visi-Trak Worldwide, LLC today announced the Total-Trak™ Programmable Logic Controller (PLC) interface which expands their process control systems beyond shot control to encompass the entire machine cell. A single Visi-Trak station can now control every aspect of a machine cell from the ladle to the extractor. This new product maximizes the overall efficiency of each cell by reducing downtime, set-up time, cycle-time, and operator intervention in die casting manufacturing processes.

Visi-Trak pioneered process automation in the die-casting industry - increasing its customer's efficiency, quality level, and profitability for over 30 years. From the first monitoring and shot control applications to data collection and reporting tools, Visi-Trak has provided the die-casting industry with the tools needed to increase quality and throughput while decreasing cost. Visi-Trak continues to help customers become more competitive today by developing new sensor technologies for other industrial applications and integrating auxiliary systems via programmable logic controller (PLC) control and monitoring software into complete process automation solutions.

Jack Vann, Visi-Trak's President and CEO said, "The Total-Trak PLC interface adds a critical component to Vis-Trak's die-casting monitoring & control systems. By combining PLC control with shot control our customers can control every aspect of their entire machine cell from a single station. This level of process control reduces cycle-time, minimizes operator interaction, and maximizes machine efficiency – which has direct impact on the profit margin of every part produced."

Total-Trak™ PLC Interface can be added to any Visi-Trak control system to enable complete PLC I/O diagnostics for easy troubleshooting. Total-Trak also offers optional integrated ladder logic display of your PLC programs.

Derek Carbonneau, Director of Marketing for Visi-Trak said, "Total-Trak comes on the scene at a critical time – offering customers an affordable upgrade alternative to a significant installed base of aging ProManager systems."

VISI-TRAK® INTRODUCES TOTAL-TRAK™ PROGRAMMABLE LOGIC CONTROLLER (PLC) INTERFACE

Brian Surch, Maintenance Manager Port City Group, Muskegon, MI said about Total-Trak:

“We were relieved to find an economical replacement for our old ProManager systems. That it was a Visi-Trak product, with their support, made it even better. The machine now has acceleration control capability, which it did not have before, and the entire installation took just a couple of hours.”

Pricing and Availability

Total-Trak - Programmable Logic Controller (PLC) Interface is available for immediate sale at a price of \$6000 for use with any existing Visi-Trak monitoring or control options.

For more information on Total-Trak or any of Visi-Trak process control systems visit <http://www.Visi-Trak.com> or call 800.252.8725 for purchasing information.

COMPANY BACKGROUND

Visi-Trak® Worldwide, LLC (Cleveland, OH) and its predecessor companies have been developing industrial sensors and control systems since 1972. Visi-Trak® Worldwide, LLC produces precision sensors, monitoring systems, and control software for rugged industrial applications. Visi-Trak's products include a line of digital quadrature encoder and high-resolution linear position systems as well as the Fas-Trak2™, True-Trak20/20™, and Sure-Trak2™ data acquisition, monitoring, and control systems. Visi-Trak® industrial control software includes SoftSHOT™ for precision die-casting impact control and Total-Trak HMI integrated PLC interface. Visi-Trak® has offices in Charlottesville VA, and is headquartered in Cleveland OH. Visi-Trak® Worldwide, LLC is privately held. Visit Visi-Trak® at <http://www.Visi-Trak.com> or call 800.252.8725 for purchasing information.
